OPA-PICK by On Point Audio

The OPA **P**ermanent **I**nstallation **C**onversion **K**it (OPA-PICK) is an optional accessory designed for use with On Point Audio wood speakers. The kit converts certain On Point Audio speakers from their standard portable audio configuration to a more installation-friendly configuration. The OPA-PICK includes two handle replacement covers and two mounting pole socket covers (two pole socket covers are required for use with the OPALine vertical array). Replacing the handles and pole sockets creates a “finished” professional appearance that is necessary for some installation applications.

The OPA-PICK’s handle and pole socket covers are made of solid wood that is finished with On Point Audio’s exclusive PowerCoat™ texture finish, thus allowing the appearance of the enclosure to match perfectly.
