

# OPA-PTB

The On Point Audio Series OPA-PTB is a wall mount pan and tilt bracket designed to be used exclusively with the On Point Audio OPA-12 and OPALine top enclosure loudspeaker systems. The OPA-PTB may be mounted to any suitable wall structure and allows the OPA-12 or OPALine top loudspeaker enclosure to be panned in 10 degree steps with a +/-30 degree total range. The tilt axis allows for a full 35 degree down tilt with 5 degree steps.

The OPA-PTB is a rugged steel construction and is supplied with all necessary hardware to mount the approved enclosures. The “associated rigging” hardware required for mounting the assembly to a wall structure is not supplied due to the wide variety of wall construction types.

The OPA-PTB is coated in a durable black conformal coating and offers a very high safety factor for the enclosure to bracket mount.

For full installation instructions please see “Pan and Tilt Bracket Installation Guide OPA-PTB”. This document may be found on the On Point Audio web site at: <http://www.onesystems.com>
