

PTB-82

The On Point Audio Series PTB-82 is a wall mount pan and tilt bracket designed to be used exclusively with the On Point Audio OPALine-82 column loudspeaker system. The PTB-82 may be mounted to any suitable wall structure and allows a maximum of two OPALine-82 column loudspeaker enclosures to be panned in 7.5 degree steps with a +/-30 degree total range. The tilt axis allows for a 15 degree down tilt with 3.8 degree steps.

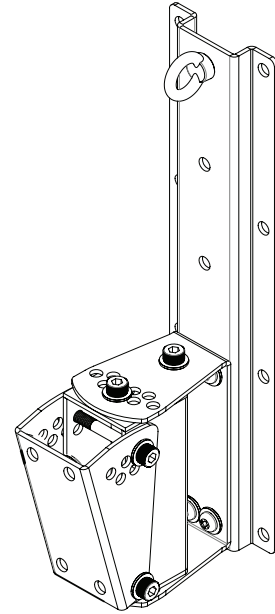

The PTB-82 has rugged steel construction and is supplied with all necessary hardware to mount the approved enclosures. The “associated rigging” hardware required for mounting the assembly to a wall structure is not supplied, due to the wide variety of wall construction types.

The PTB-82 is coated in a durable black or white conformal coating and offers a very high safety factor for the enclosure to bracket mount.

For full installation instructions, please see the PTB-82 installation manual.
