

TBEC-82

The On Point Audio TBEC-82 is a coupling bracket designed to be used exclusively with the On Point Audio OPALine-82 column loudspeaker system. The TBEC-82 may be used to couple a maximum of two OPALine-82 column loudspeaker enclosures together to form a two element vertical array.

The TBEC-82 allows four tilt positions between two OPALine-82 enclosures. The tilt range is from 0 degrees to 15 degrees in 5 degree increments.

The TBEC-82 is coated in a durable black or white conformal coating and offers a very high safety factor for the enclosure to bracket mount. The TBEC is for indoor use only!

For full installation instructions please see the TBEC-82 installation manual. This document may be found on the On Point Audio web site at: <http://www.onpointaudio.com>
